

Dro Sensor

From box to first reading in five steps.

Set up

1

Install the battery

Open the back cover, connect the included 9 V battery with correct polarity, and replace the cover.

2

Get the Growbud app

Search “growbud” in the Apple App Store or Google Play Store, or visit www.growbud.app. Create an account.

3

Pair the sensor

Enable Bluetooth. In the app choose Add Device, then touch the green center button with an ungloved finger. A blue blink confirms power and pairing mode.

TURN OVER FOR PLACEMENT + FIRST READING →

Place, read, and verify

4

Install in the root zone

Place the active region near the wettest part of the container. With drip irrigation this is often lower in the root zone; with hand watering it may be nearer the top. Insert the full probe length. The polished bottom 2 in (51 mm) of each needle is the active sensing region.

5

Run Spot Check

Use Spot Check in the app for a current reading. The button is only needed for one-time pairing. Let the sensor settle through one significant irrigation event before judging trends.

GOOD PLACEMENT

- Active region fully in media
- Firm, repeatable position
- Away from air gaps and walls

IF IT DOES NOT CONNECT

- Check battery polarity
- Move the phone closer
- Enable Bluetooth and retry

ACTIVE REGION

Polished bottom 2 in (51 mm)

CARE

Remove the battery before cleaning. Wipe probes with 70% or higher isopropyl alcohol.
